

CENSUS

S T . M A A R T E N

"Count us in."

PREFACE

In the face of, the lengthy release of the Fifth Population & Housing Census on St. Maarten, the Department of Statistics (STAT) takes great pleasure in delivering this publication of main results. The census-taking exercise, and the subsequent compilation and analysis of data has ultimately afforded the general public of St. Maarten, with a rich profile on our numbers, our make-up, our locations as well as general & living circumstances of our resident population. These facts are of particular importance given our recent realization of autonomous country St. Maarten within the Dutch Kingdom.

This publication examines the major population developments of the 2011 census, while also looking at historical trends of the previous 2001 census and prior. These results are meant to make a meaningful contribution towards increased evidence-based national planning, policy-setting and will hopefully strengthen new and existing programs tailored to the needs of various sub-groups within our community.

STAT would like to especially acknowledge Ms. Maurette Antersijn as project lead on the 2011 census; for her tireless and resolute coordination from the very beginning through what appears never-ending. A special thanks goes to the remaining STAT team, especially those members who were pulled from their regular assignments, to support the completion of this project.

In addition, STAT extends its gratitude to the numerous interviewing staff, data-entry and mapping staff who assisted the department in the field, and with its processing activities. Thanks also to all those persons who offered their expertise and professional advice to STAT, in the course of us executing this crucial venture for the very first time. Finally, a big thank-you to all inhabitants who gave their full understanding and cooperation.

Topical bulletins will be made available in the coming months, for example via special editions of our statistical magazine FACTors. This will include detailed analyses on varying topics from the 2011 census database. Users of our census information are also encouraged to contact STAT should you require details on any specific aspect, that may not yet be readily accessible.

Ms. Makini Hickinson

Department Head STAT

CENSUS

CHAPTER 1: CENSUS BACKGROUND & ORGANISATION

1.1 INTRODUCTION

On April 9th through 17th 2011, the fifth Population & Housing Census was carried out on St. Maarten, under the responsibility of the then new Department of Statistics (STAT). The planning & organization process was initiated by the former Central Bureau of Statistics, Netherlands Antilles on Curacao. After the birth of the new countries St. Maarten and Curacao in October 2010, it was agreed that STAT & CBS Curacao would continue to collaborate on the census project, by the use of a common questionnaire & overall methodology.

Assistance was provided to STAT during the preparation phases, in the areas of questionnaire development, maps for fieldwork staff, interviewer trainings & materials and the pilot census. Additionally, STAT received assistance following the so-called 'Census week' of April 9 – 17th 2011, on initial data processing which included, scanning & coding of forms, and data-cleaning.

The 2011 census was the fifth to be executed on St. Maarten, but the first General Population and Housing Census of the new Country St. Maarten and therefore serves as a baseline; its results indicate the demographic and socio-economic status of the population and their living conditions at that specific moment in our country's history.

The concept Census literally means "count". Years ago a census was limited to counting the number of people in a country. Nowadays – in most countries a census is more extensive. Despite the periodic nature of these inquiries one is still able to obtain an idea of the nature and pace of developments and changes occurred between measuring periods.

1.2 CENSUS LEGAL BASE

The national ordinance of December 9th 1971, 'Census Ordinance', provides the legal basis under which a general population census is to be held on St. Maarten. It states via national decree, the time of the census is determined, and further regulates that data with respect to the structure of the population is collected from all persons that are resident in the country, and staying or intending to stay for at least 1 year.

Moreover, stipulations are provided for a pilot census to precede the actual census, the publication of census results, as well as for cooperation by the governing body to the statistical office in executing the census task.

The law also covers the obligation of inhabitants to truthfully provide their data, as well the obligation by all persons privy to the gathered census data through their work, to handle all data confidentially.

1.3 CENSUS EXECUTION

Research Method

The 2011 census was conducted via door-to-door interviews with the use of a 2-part paper questionnaire. Each interview consisted of one living-accommodation questionnaire per household and one personal questionnaire for each member of the household. A household is defined as a person, or group of people sharing the same kitchen and living room.

The questionnaires were developed on the basis of the UN "Principles and Recommendations for Population and Housing Censuses", also consideration was given to the information needs of census-data users on St. Maarten, many of whom were consulted in sessions held by CBS & STAT during the planning-phase. Other factors such as suitability and comparability with the 2001 census questions played a key role in the final version of the 2011 census questionnaire.

The questionnaire was translated and used in the field where applicable in the following languages: English, Dutch, Spanish, Papiamentu and Creole. The living-accommodation form consisted of questions on composition of households, family relationships, the nature of the living space, water and energy supply, languages spoken in the household, construction and quality of the living-accommodation and amenities found in the living space.

The personal form consisted of questions related to the age & sex of individuals, migration trends, nationality, religion, marital status, health, fertility, education and income levels.

Field Conduct

St. Maarten was divided into 29 enumeration districts, each with an enumeration centre (school or community centre), from which approximately 500 enumerators in total, were deployed to cover the entire Dutch side of the island. Each enumeration district was further sub-divided into 16 blocks, and each enumerator was assigned one block, with approximately 30 addresses (building points) to be completed during the 'census week'.

All 29 enumeration districts were led by a 'Head enumerator' and an assistant, which in most cases were either a school principal/manager or other senior staff. These persons were responsible for a team of 16 enumerators each, also to ensure the fluent progress of the count within their district and were ultimately responsible for reporting of the field progress to STAT.

Apart from this, a separate enumeration team was deployed to census all 'collective dwellings' such as nursing & retirement homes, prisons and centers for drug addicts.

Each of the 29 enumeration centres were equipped with an A0-sized map of that particular district, while enumerators were provided with more detailed maps, indicating in some cases street names, and the 30 building points they were to approach.

Interviewer trainings

All census fieldwork personnel received intense trainings in preparation for both the pilot and actual census. Presentations were prepared by STAT, initial trainings were given to the 'Head enumerators', who in turn trained their teams of 16 enumerators. Distinct training manuals were created for 'Head enumerators' and enumerators for the census questionnaire as well as the fieldwork procedures.

1.4 CENSUS TIMELINE

Pilot Census

During the week of November 13th through 21st 2010, STAT conducted a pilot census amongst approximately 200 households. The main objectives of the pilot were to test the census questionnaire and other organizational aspects of the fieldwork such as trainings, maps & orientation in the field, public responsiveness, interviewer materials & procedures. Following the pilot, an evaluation was undertaken, based primarily on the interviewers' feedback, which led to a number of improvements and added action points in all of these areas prior to the actual Census.

Census Week

The 2011 census 'moment' was set at 0:00hours on Saturday April 9th 2011. Although the actual count lasted for a period of 9 days (until Sunday April 17th 2011), all questions asked were related to the situation as it were at the census 'moment'.

During the census period, working hours were from about 1:30pm to 7:00pm daily. This was due to the fact, quite a number of interviewers were school teachers. However unlike in previous census years where primary-school closure was granted to allow a high participation of school teachers in the census, the Ministry of Education did not approve school closure for the 2011 census. This development would later have an adverse effect on the census in terms of less teacher participation and thus lesser quality enumerators, and no full-day working hours for the census during the days Monday to Friday of that week.

Census history has shown it is merely impossible to reach all inhabitants of the country within a one-week period, given that some or all persons in the household may not be at home, may be off-island etc. In addition, there were some

areas that were not completely covered, in cases where there was enumerator withdrawal from the census.

As a result, a recount or post-enumeration survey was conducted by STAT in June 2011.

Initial Census Data Processing

STAT & CBS Curacao had an agreement that all collected census forms from St. Maarten would be sent to Curacao for the purpose of scanning, coding and editing. In preparation for this, STAT began with an initial check of all forms and ensured the correct order in each enumeration district.

CBS Curacao commenced with the scanning & coding of the Curacao census forms first, once that process was completed, census forms of St. Maarten were sent to Curacao in September 2011. The scanning of St. Maarten's forms took longer than anticipated due to, a mismatch in paper-size (forms were printed on two different size papers) which resulted in a bottleneck at scanning, and ultimately also an inconsistent data-file which could not be used for data-analysis.

In the meantime, STAT decided to conduct a second recount, this was done during the period mid-April to mid-July 2012, using the same census 'moment' of April 9th 2011 as the reference point.

The main purpose for this count, was to further examine the differences between our enumerated population with the last population estimate and the registered population at the Civil Registry Department. STAT wanted to find out from households whether they were interviewed during the Census, if they were not and were eligible, we conducted the interview. By this time, STAT had invested in some 25 Samsung tablets, and so this count was conducted by select interviewers and captured digitally with the tablets.

Furthermore, a comprehensive geographical information system for St. Maarten did not exist during the time of the census, which could provide a basis for STAT to compare its addresses and counted households versus the actual situation in the field.

Second-stage Data processing

Census forms for St. Maarten were returned to the STAT office from CBS Curacao and in August 2012 STAT began anew with processing of its census forms. This was the only manner in which STAT could guarantee sound results concerning the 2011 census. Data-entry was performed via the tablets. This process lasted 7 weeks. Once the forms were digitized, the file was merged with the data collected in the second recount.

During the period September to December 2012, coding &

editing of the census data was carried out.

During the months January to March 2013, STAT also conducted the data-collection for a mapping project. This project in collaboration with the Ministry of Public housing, spatial planning, Environment & Infrastructure (VROMI), aims to update the government's geographic information system (GIS) which is housed within that Ministry.

Data was gathered with regards to the location and function of each building on Dutch St. Maarten. This vital information was needed at STAT, in order to cross reference existing residences versus enumerated residences during the census.

1.5 DEFINITIONS

Household

A household can consist of a single person living on his own or more persons living together. Persons who form a household together are engaged in informal domestic relations, meaning a mutual agreement has been made concerning the purchase of food and other living necessities and the living room & kitchen is being shared by everyone.

Head of the household

The head is the reference person within a household. The head is usually nominated as such by the other members in the household or otherwise the person under whose name the house/apartment is registered.

Living Accommodation (private / not-collective)

A living accommodation is a building, a set of buildings or part of a building consisting of any kind of material which has been designed or has been made suitable through cultivation for habitation by one household. A living accommodation is by definition inhabited by only one household. Besides this type of living accommodation we also distinguish the collective living accommodation.

Nuclear family

A nuclear family is a unity within a household that consists of:

Two people who are connected through marriage or partnership;

Two people who are connected through marriage or partnership with one or more children (including adopted children);

A parent with one or more children.

Family

Those household members that are linked to each other through blood, adoption, marriage or living together; so all blood relatives and in-laws (through marriage or partnership).

Disability

A disability is defined as a physical or mental condition that seriously hinders day-to-day functioning.

Occupation

Occupation relates to the work that is currently being performed by an individual. For persons with multiple occupations it relates to that which occupies the most number of hours.

Day school/daytime education

A day school is an educational institution where students are taught daily and during the day. Examples of day schools are: nursery schools, day-care centers, primary schools, secondary schools and universities.

EDUCATION LEVELS

Pre-school	Playschool, Crèche, Early stimulation

DEMOGRAPHICS

plural noun

Statistical data relating to the population & particular groups within it.

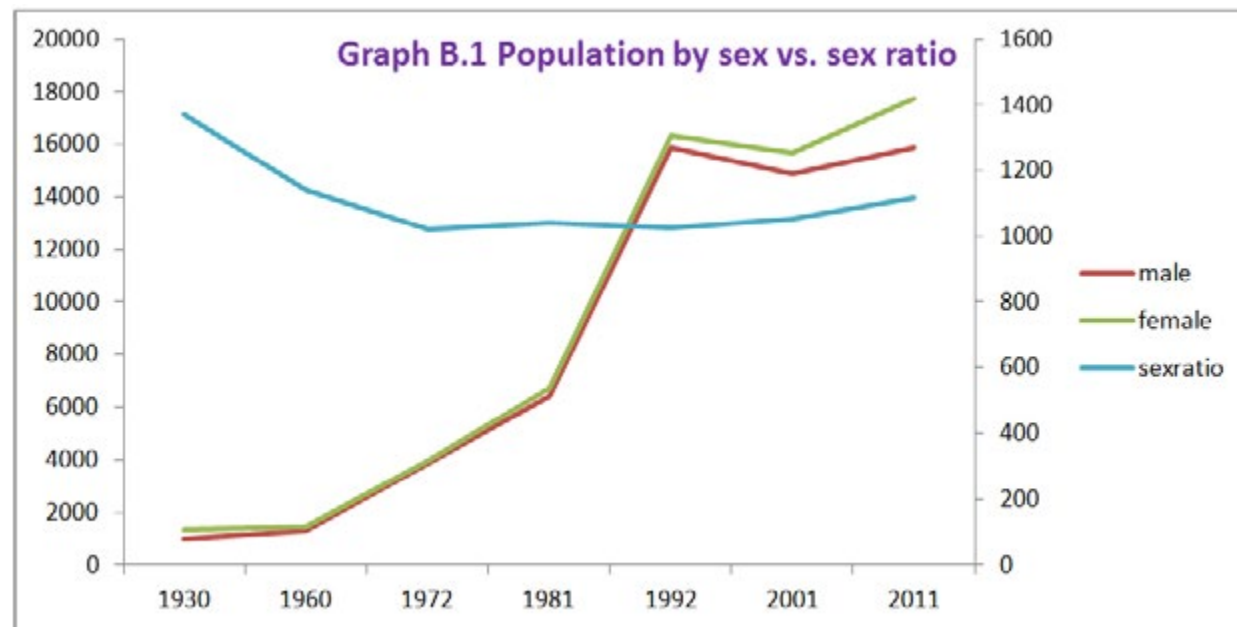

Demographics

The population of Sint Maarten on April 9th 2011 was 33,609 of which 15,868 were male and 17,741 female. This is an increase of 9.85% on the 2001 Census results.

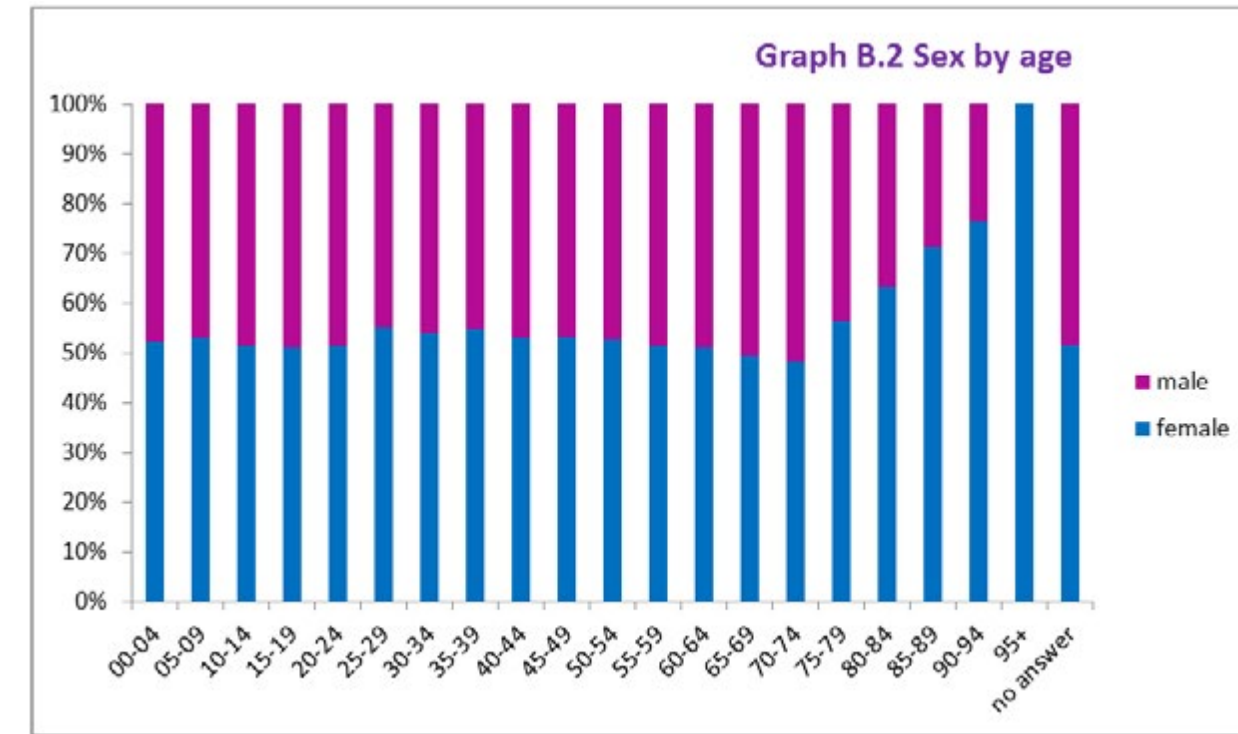

Sex Ratio	Male	Female	Total	Sex Ratio
1930	984	1,351	2,335	1,373
1960	1,273	1,455	2,728	1,143
1972	3,862	3,945	7,807	1,021
1981	6,439	6,717	13,156	1,043
1992	15,901	16,320	32,221	1,026
2001	14,890	15,704	30,594	1,055
2011	15,868	17,741	33,609	1,118

Table B.1 Sex ratio 1930 - 2011

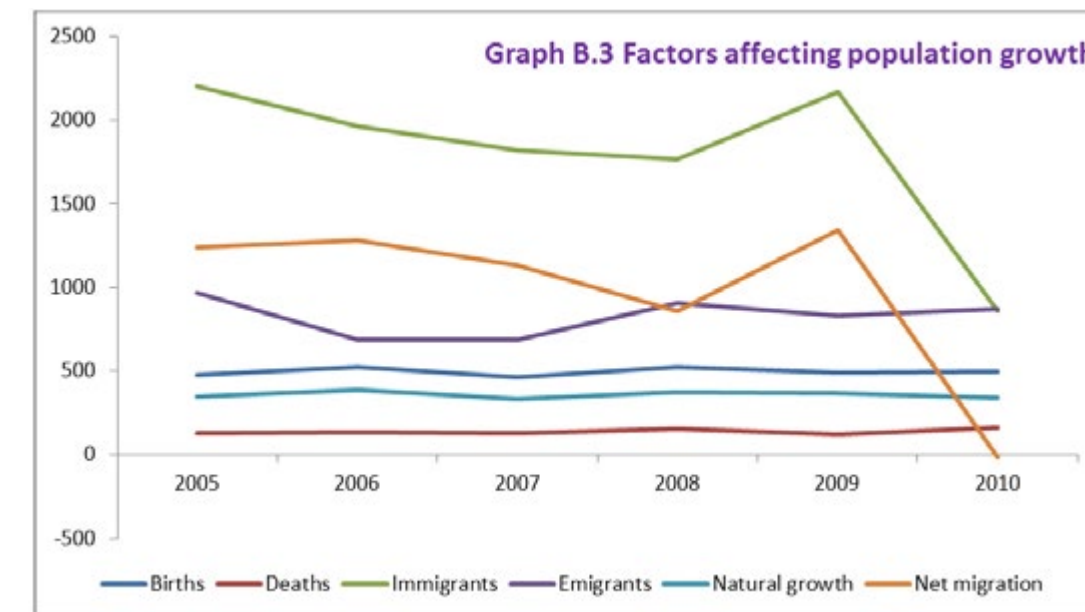

The sex ratio has increased from 1,055 females for every 1,000 males in 2001, to 1,118 females in 2011. The sex ratio has been relatively constant since the 1960s. Before this period, many men left the island in search of work elsewhere. Graph B.1 shows that starting in 1992, the gap between females and males has increased steadily causing the sex ratio to increase as a consequence.

The largest sex ratio is in the age group 75 and older. The only categories where there are more males than females is in the age category 65 – 74.

The growth of a population depends on different factors: births, deaths, emigration and immigration. If the population increases it is due to higher births than deaths and / or a higher in-migration. Looking at the numbers received from the Civil Registry Department, it can be concluded that the increase is due to natural growth and not in-migration. While natural growth has been stable over the past years, net migration shows some instability.

	2005	2006	2007	2008	2009	2010
Births	473	526	462	526	490	496
Deaths	127	138	127	152	123	160
Immigration	2,204	1,964	1,818	1,763	2,170	859
Emigration	966	685	688	905	827	873
Natural growth	346	388	335	374	367	336
Net migration	1,238	1,279	1,130	858	1,343	-14

Table B.2 Population growth factors 2005 – 2010 (Department of Civil Registry)

The net migration refers to registered migration movements, this does not account for the un-registered migration movements. Un-registered migration refers to undocumented inhabitants who are residing on the island. Research has shown that size of un-registered migrants depends on the economic prosperity on the island where they reside. Looking at the moderated economic climate and the slowed increase in the Census population size, it opens the possibility that un-registered migration also diminished contributing to the minimal increase in the population size.

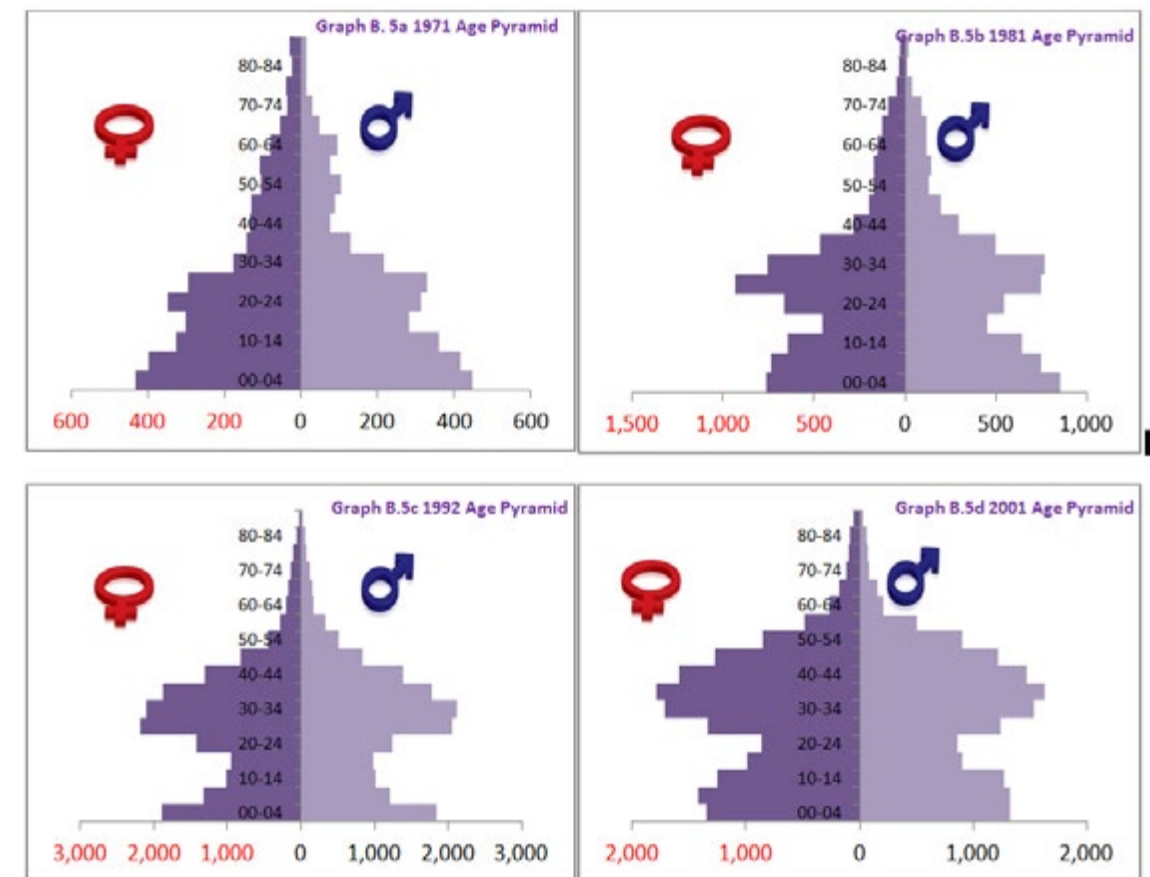

The share of persons ages 65+ on Sint Maarten was close to 10% in the 1960s. This share has decreased over time to a low of 3% in 2001. In 2011 this number increased to 5.3%, along with an increase share of 15-64 year olds and a diminishing share of 0-14 year olds, it is safe to say that the population of Sint Maarten is ageing. The workforce is increasing with an emphasis on the elder population.

	1960	1972	1981	1992	2001	2011
0-14	39.5	37.3	33.4	25.7	26	22.1
15-64	50.7	57.8	62	71.4	71	72.6
65+	9.8	4.9	4.6	2.9	3	5.3
Average age	28.6	25.3	26.2	28.2	30.7	33.8
Median age						35

Table B.3 Age categories 1960 - 2011

The age pyramids from 1971 to 2011 show the changing make-up of the Sint Maarten population. In 1971 the bulk of the population was from age 0 to 34. This changed in 1981 when the middle was getting bigger and the base was decreasing relatively. During the next years, the bulk shifted higher while the base continued to be relatively smaller. The number of middle-agers were increasing more rapid than the youth. In 2001, there was a solid move to a middle aged population. In 2011 these middle agers are reaching retirement age thus confirming an ageing Sint Maarten population.

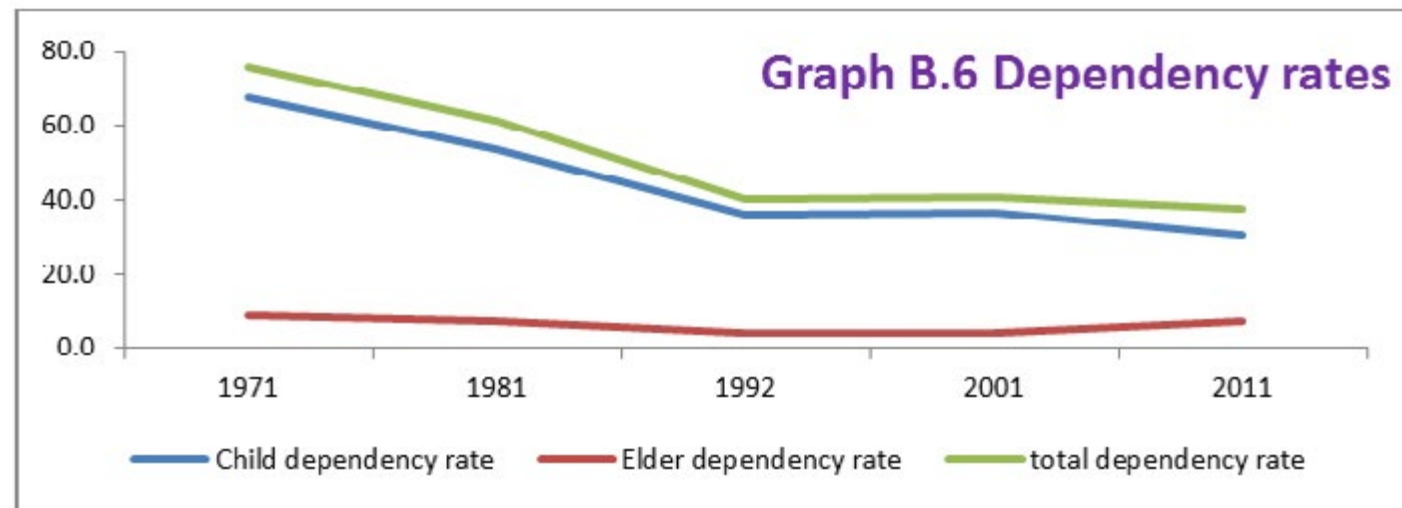

The child dependency ratio and the elderly dependency ratio are measures of the burden on the workforce. Children and the elderly are typically not part of the workforce. These ratios determine how much this section of the population depend on the workforce. As the ratio increases there may be an increased burden on the productive part of the population to maintain the upbringing and pensions of the economically dependent. This results in direct impacts on financial expenditures on things like social security, as well as many indirect consequences. Bear in mind however that it ignores whether or not there are 65+-ers who are not dependent.

Dependency Rates	1971	1981	1992	2001	2011
Child dependency rate	67.5	53.9	36.0	36.6	30.5
Elder dependency rate	8.6	7.5	4.1	4.3	7.2
total dependency rate	76.1	61.4	40.1	40.8	37.7

Table B.4 Dependency rates 1970 - 2011

The child and elderly dependency ratios have declined since 1971. A dependency ratio of 50 or higher is a heavy burden on a country's economy. The dependency rate of 37.7 is considered stable.

The percentage of people born on Dutch Sint Maarten has remained stable since 1992. In contrast, the percentage of people born on one of the islands of the former Netherlands Antilles has decreased from 13.5% to 8.5% while the percentage of people born elsewhere increased from 56.1% to 61%.

Place of birth	1992	2001	2011
St. Maarten	30.4	30.5	30.5
Other islands of the former Neth. Antilles and Aruba	13.5	10.5	8.5
Elsewhere	56.1	59	61.0

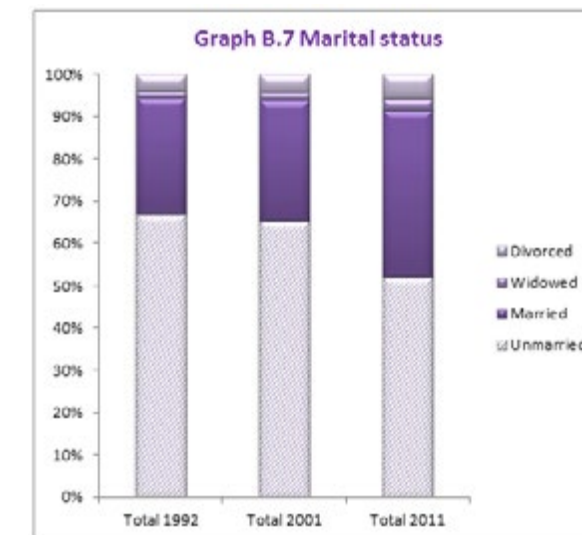

Table B.5 Place of birth 1992 - 2011

The same cannot be said about nationalities, as the proportion of the population with a Dutch nationality has increased from 47.9% in 1992 to 64.7% in 2011. Other nationalities that increased during this period are Jamaican and Guyanese; while persons with a Dominican Republic nationality, Haitian, Dominican, French, American and British all saw a decrease.

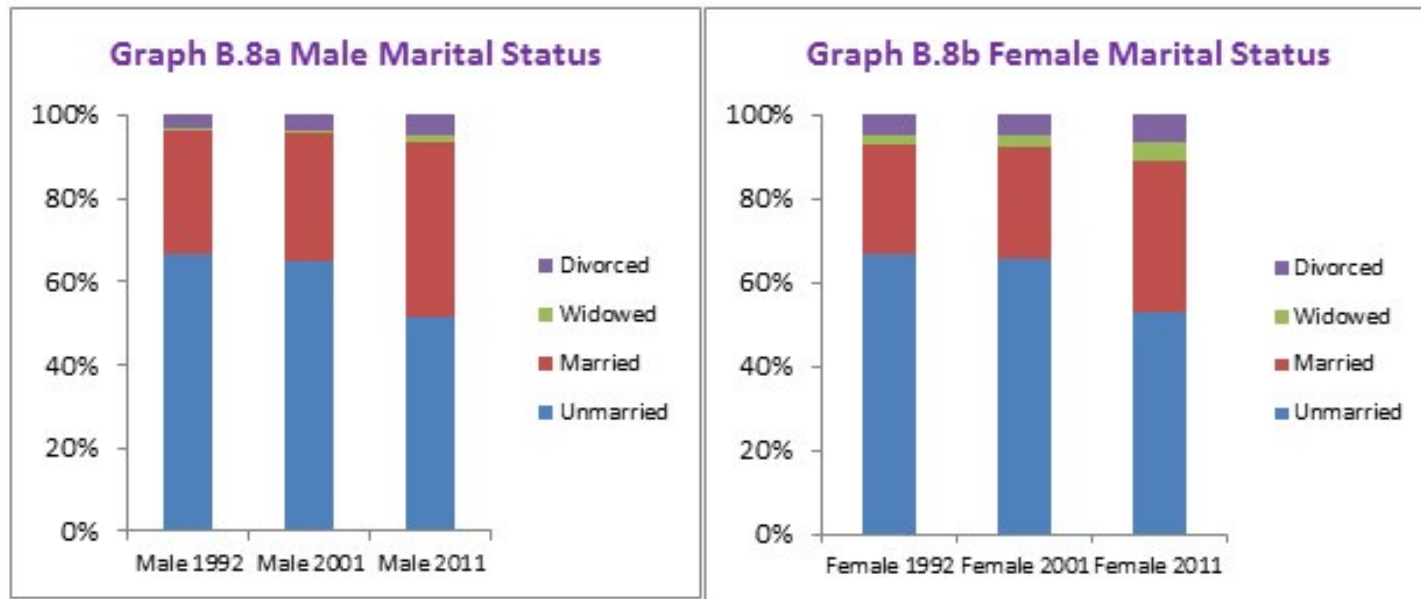

Nationality	1992	2001	2011
The Netherlands	47.9	50.6	64.7
Dominican Republic	11.5	10.1	5.8
Haiti	14	9.7	6.9
Jamaica	1.8	5	5.5
Dominica	3.8	4.4	3.0
Guyana	0.6	3	3.9
France	3.8	2.7	0.4
England	4.3	2	0.1
USA	2.4	1.8	1.0
Other	18.5	10.7	8.7

Table B. 6 Nationality 1992 - 2011

There are less unmarried (never been married) persons on Sint Maarten in 2011 than in 1992. In 1992, 66.8% of the population was unmarried. In 2011, this decreased to 52.1%. The divorced, widowed and married population show a significant increase compared to 1992.

Divorced and widowed females show a higher increase than divorced males.

The religious pattern on Sint Maarten has changed over time. Even though the majority is still Roman Catholic, the share decreased from 42.2 in 1992 to 33.1 in 2011. The religions that show an increase are Pentecostal and Adventist. The Pentecostal followers have more than doubled in size with a 9 percentage point increase from 1992 to 2011. The Adventist religion has only a slight increase since 2001 but compared to 1992, the followers increased from 3.6% to 6.6%.

Religion	1992	2001	2011
Roman Catholic	42.2	39.8	33.1
Pentecostal	5.7	11.6	14.7
Methodist	13.2	11.5	10.0
Adventist	3.6	6.2	6.6
Baptist	7.3	6.7	4.7
Anglican	4	3.9	3.1
Protestant	2.8	3.1	2.8
Hinduism			5.2
Christianity			4.1
Other	10.2	10.4	7.8
No religion	11	6.7	7.9

Table B.7 Religion 1992 - 2011

The Total Fertility Rate for 2011 is 2.03. Looking at the table, it can be concluded that the fertility rate has been pretty constant for the past decades. The Total Fertility Rate (TFR) is a measure of the number of children a woman on average will bear during her reproductive life, subject to all the age-specific fertility rates for ages 15–49 that were recorded for a given population in a given year.

	1992	2001	2011
Total Fertility Rate	2.03	1.95	2.03

Table B.8 Total Fertility Rate 1992 - 2011

HEALTH

noun [mass noun]

The state of being free from illness or injury.

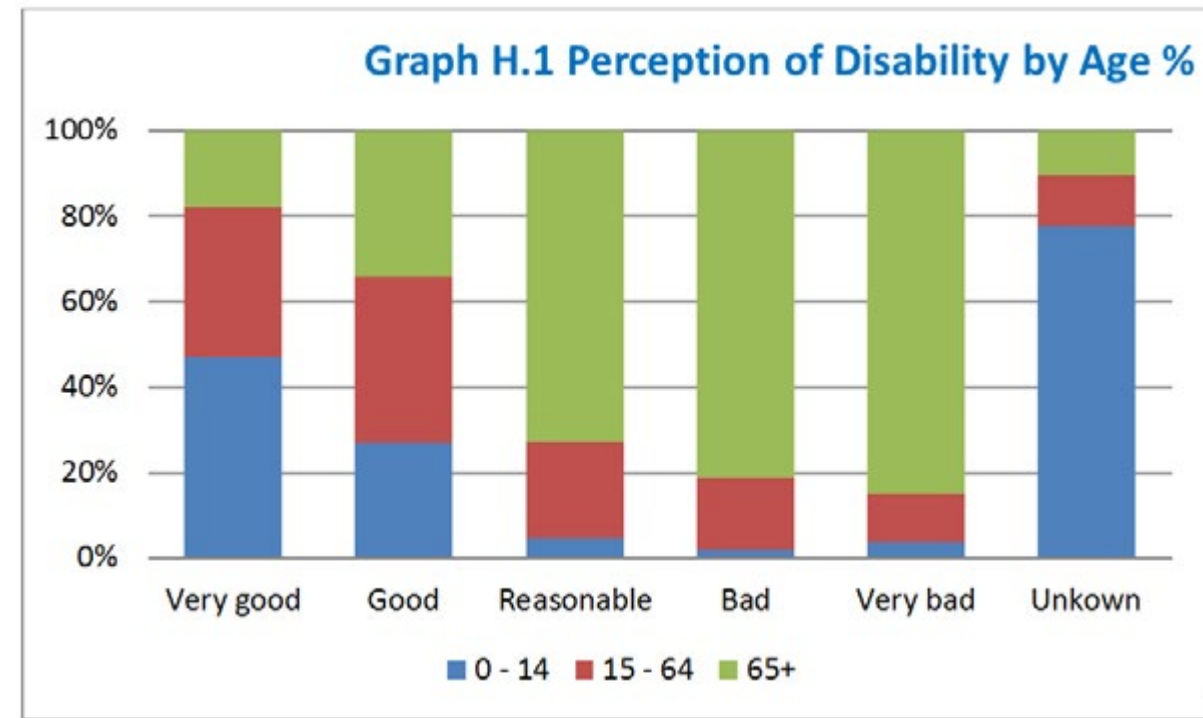

Health

Since previous censuses (St. Maarten, 1992 & 2001) a primary question concerned individuals' health perception¹. This being quite a subjective question, the responses usually provide a relative perspective on how residents view their own overall health.

Health Perception of the population in %									
Opinions:	1992			2001			2011		
	Male	Female	Total	Male	Female	Total	Male	Female	Total
Very good	51.1	47.3	49.2	41.7	39.6	40.6	48.2	46.7	47.4
Good	43.3	44.7	44	48.9	49	48.9	41.7	41.8	41.7
Reasonable	4.7	6.5	5.6	8.5	10.2	9.4	8.9	10.2	9.6
Bad	0.9	1.4	1.1	0.6	1	0.8	1.0	1.0	1.0
Very bad	0	0.1	0.1	0.3	0.2	0.3	0.2	0.3	0.2
Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0

Table H.1. Health perception 2011 in %

Combining the categories “very good” and “good”, across the three census periods, it is obvious that the differences between these periods are rather small. During the 2011 census 89.1% of the population judged their health positively, compared to 89.5% in 2001 and 93.2% in 1992. This indicates that while the overall health perception of the population remained mostly positive, in the past 20 years the trend has decreased. There has also been an observed shift from the judgment “very good” to “good”.

When splitting up according to age, the results are as follows: in 0-14 age groups 88.8% has a positive opinion about his/her health, of which 66.0% indicated their health as “very good” and 34.0% as “good”. The corresponding figures for age groups 15-64 are respectively 87.6% indicated a positive health response, with 50% as “very good” and 50% as “good”.

Conversely, persons age 65 and above, indicated a 60.6% overall positive response, with just 36.6% responding as “very good” and 63.4% as “good”. Table H.2 displays the percentages for each category per age group in 2011.

Table H.3 Perspective of health by age 2011

Disability

Table H.4 lists the corresponding disabilities per census year and the percentage of the disabled population inflicted with these disabilities. Hearing and visual impairments were additional items to this list of disabilities in the 2011 Census. Recent census figures suggest that 11.4% of the total population, 3843 persons, has one or more disabilities. This is a huge contrast to the proportions reported in 1992 and 2001, 1.0% (313 persons) and 2.1% (652 persons) respectively. It is likely that the new indicators (visual & hearing impaired) cover a larger percent of the population, the numbers suggest such, as visual impairment encompass 61% of the total population. If visual and hearing impairments are omitted, the percentage of the population with a disability changes to 4.1%.

Retrospectively, the disabled population has increased by 1,388 over the period 1992 - 2011. Of the persons in 2011 with 1 or more disabilities, 2.2% are blind, 0.5% deaf, 17.5% has another physical disability², and 4.4% has an intellectual disability³. This analysis excludes respondents who are visually and hearing impaired. Table H2 gives a summary result of the past three census periods (1992, 2001, and 2011). However, not all of the figures can be directly compared with their counterparts from other periods.

A person is said to have difficulty performing certain tasks when they have reported at least some difficulty related to their ability to see, hear or walk. The proportion of persons with difficulty, gives a separate measure of the disabled population on Sint Maarten. These questions are known as the Washington Group on Disability Statistics Short set questions. According to this definition, the percentage of less abled people is 18.2%.

Respondents were further asked to indicate the manner in which they were medically insured (table H3). The majority of the respondents, slightly less than two thirds (64.9%), are insured via the SVB/BZV/SZV. Privately insured individuals accounted for 14.6%, followed by respondents insured through their employers (1.7%). Furthermore, 1.6% possess a "PP-card" and 1% of respondents are insured via the ZOG Fund, the Health Insurance for Government Pensioners.

Although the percentage of individuals that were uninsured dropped drastically from 29.5% (2001) to 12.3% (2011), 58.4%

² Persons with physical disability have decreased 49.7% since 2001. Physical disabilities consist of cannot talk, problems with one/both legs or arms, and other physical disabilities.

³ In the present census intellectual disability is an aggregate of intellectual and mental disability (see table H2).

Disabled population by type of disability (%)			
Disability	1992	2001	2011
Blind	5.4	3.8	0.8
Deaf	2.9	4.3	0.2

overall decrease, they however ranked the third largest group in the results (see table H3). Unlike the 2001 census, in 2011, census respondents were not given an option to indicate if they were part of more than one insurance scheme. Therefore, a comparison cannot be made on this category between the two census periods. In addition, 3% of respondents did not report their insurance status and 1.1% indicated not knowing there status for 2011 census.

EDUCATION

noun [mass noun]

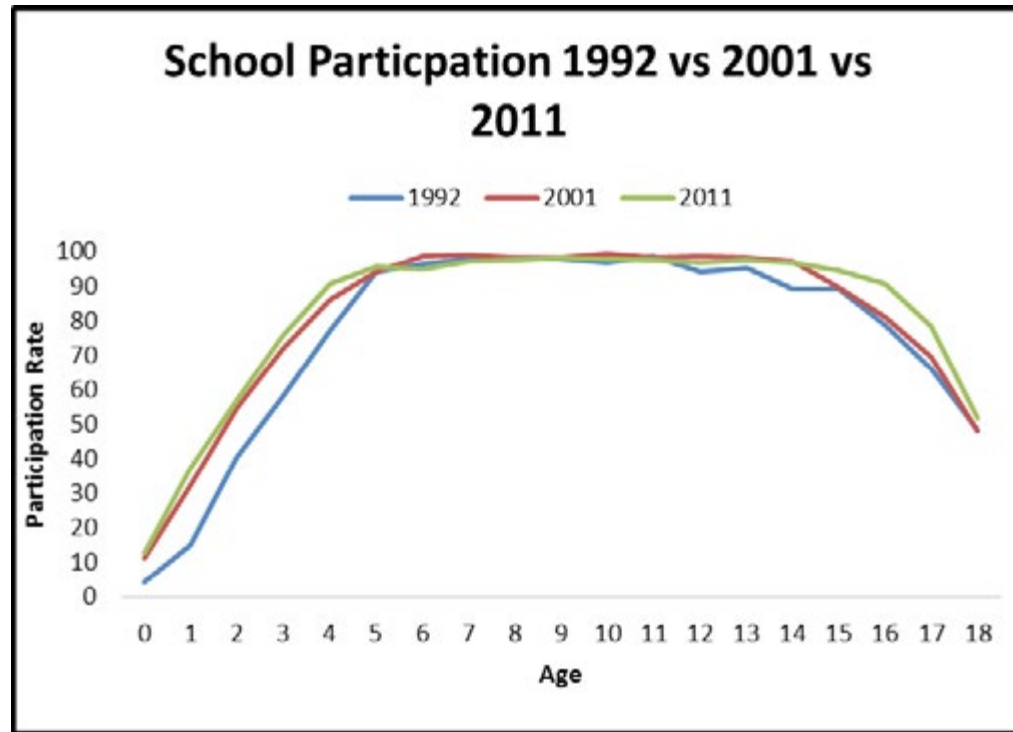

The process of receiving or giving systematic instruction, especially at a school or university.

a body of knowledge acquired while being educated

Education

The school participation rate is the ratio between the enrolment of pupils/students in the school-age range to the total population of that age range. In 2011, the participation rate of 1 – 18 year olds have increased significantly. Over half of 18 year olds (51.9%) are now attending a daytime school whereas in 1992 and 2001 this was 48.6% and 48.1% respectively. This trend is also visible between the 0-4 year olds. Where only 4.4% of 0 year olds were attending a nursery / day-care in 1992, this share has increased to 12.7% in 2011.

In April 2011, the participation rate of 4 year olds was 90.5%. This percentage includes those who attend group 1 of the Foundation based education system and those who attend day-care.

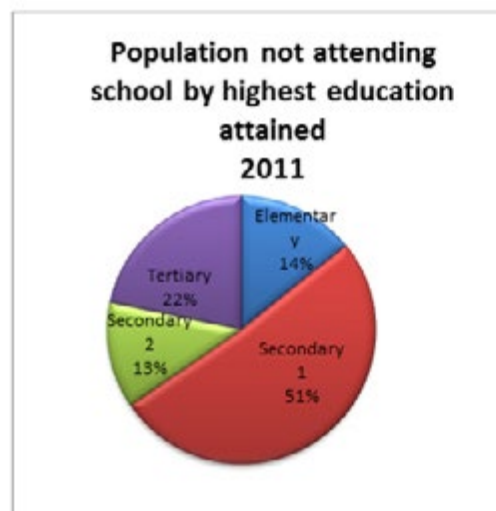

The following table D.1 indicates the proportion of pupils/students that were attending a day-school at the time of the census by education level.

	1992	2001	2011
Pre-School	14.3	13.1	13.5
Kindergarten	14.3	10.2	6.2
Primary	45.1	47.5	44.5
Secondary 1	20.5	19.3	28.4
Secondary 2	5.2	7.6	4.9
Tertiary 1	0.7	2.3	2.4
TOTAL	100	100	100

When combining attendance at Pre-school and Kindergarten levels, there is a clear downward trend in the proportion of pupils in school in 2011 compared to both 2001 & 1992. The percentage fell to 19.7 in 2011, from 23.3 in 2001 and 28.6 in 1992.

On the level of primary education, in 2011, the proportion of attending pupils fell by 3 percentage points, while attendance on secondary level education (HAVO/VWO 2 and lower) recorded the largest relative increase compared to the 2 previous censuses. Attendance at secondary level (HAVO/VWO 3 up to MBO) saw a decrease in 2011 versus 2001, while for the HBO & higher, the share in 2011 remained the same as 10 years prior.

As for the population no-longer attending school, 89.3% have reported in 2011 to have some form of education. In 2001, this proportion was a bit higher at 92.1%.

Year	Persons not attending school	% Educated
2001	21,110	91.1%
2011	22,820	89.3%

LABOUR & INCOME

noun [mass noun]

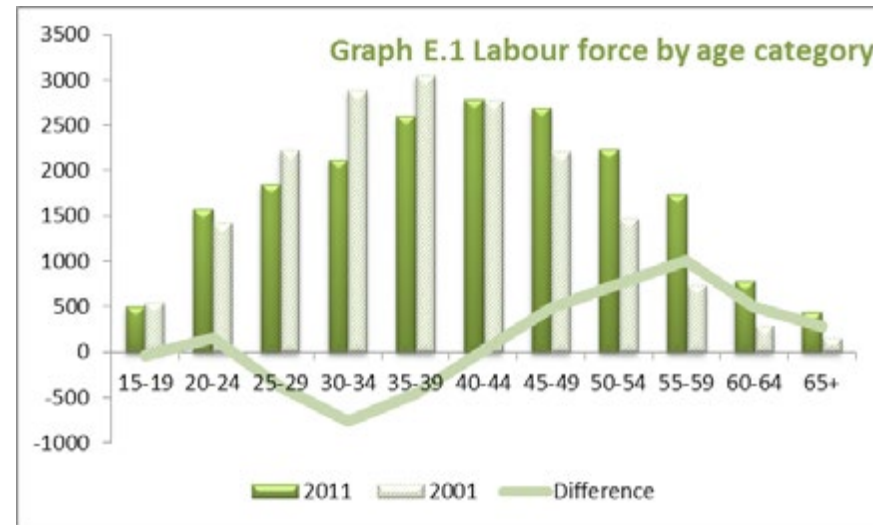

work, especially physical work.

workers, especially manual workers, considered collectively.

Labour and Income

The absolute size of the labour force in 2011 is 19,337 persons, as opposed to 17,777 in 2001 an increase of 1,560 (8.8%) persons. The proportion of the labour force in the total population is 57.5%, which is only a small change compared to 2001 (58.8%). This may lead to the conclusion that the absolute age distribution within the labour force has changed. The graph below (E.1) shows that compared to 2001, the labour force in the 15-40 age range has declined whereas the labour force in the 40 and older has increased with a greater number.

The participation rate is a measure of the active involvement of the population in the employment environment. It is the ratio of the labour force and the total population. The participation rate has been steadily increasing from 30.9% in 1960 to a participation rate of 57.5% in 2011, however recently it has declined from the highest participation rate of 60% which was recorded in 1992.

	1960	1972	1981	1992	2001	2011
Employed (1)	793	3,112	5,998	16,911	15,495	17,108
Unemployed (2)	50	298	499	2,425	2,282	2,229
Labour force (3) = 1+2	843	3,410	6,497	19,336	17,777	19,337
Total population (4)	2,728	7,807	13,156	32,221	30,594	33,609
Participation rate (3/4) (%)	30.9	43.7	49.4	60.0	58.1	57.5
Unemployment rate (2/3) (%)	5.9	8.7	7.7	12.5	12.8	11.5

Table E.1 Labour force 1960 - 2011

The unemployment rate, that is the proportion of persons actively looking for a job within the labour force, is 11.5%. This is a 1.3% decrease, compared to 2001 when the percentage was 12.8%. In comparison with the censuses before 1992, these percentages are, however, higher; in 1960, 1972 and 1981 the unemployment percentages were respectively 5.9%, 8.7% and 7.7%.

Youth unemployment –that is the proportion of the number of the unemployed in the age group of 15-24–was at the time of the census more than a quarter, 27.7%. In 2001 this was 25.2%. The unemployment rate in ages 25 and older decreased by more than 1% for each group in 2011.

Unemployment rate	2001	2011
15-24	25.2	27.7
25-44	11.5	10.1
45+	10.8	9.0

Table E.2 Unemployment Rate 2001 and 2011

According to the United Nation standards, businesses are grouped in 21 industries. The majority of our respondents, 3,356, were employed in the Wholesale and retail trade industry. In the second place came the Hotels and Restaurant industry with 2,648 respondents. 1,379 respondents were employed in the Public administration and Defence industry (government). Fourth, in the Construction industry with 1,339 respondents. In 2001, the sequence was as follows: Wholesale and retail trade as leading industry (3,084), Hotels and Restaurants (2,322), Other community, social and personal and personal service activities (1,447) and Construction (1,415).

Industry	1992	2001	2011
Agriculture, hunting and forestry	129	65	6
Fishing		24	
Mining and quarrying		9	2
Manufacturing	567	541	229
Electricity, gas and water supply	221	226	182
Construction	1,673	1,415	1,339
Wholesale and retail trade	3,332	3,084	3,356
Hotels and restaurant	3,419	2,322	2,648
Transport, storage and communication	1,089	1,314	1,083
Financial intermediation	589	432	620
Real estate, renting and business activities	1,059	1,278	1,112

Other community, social and personal services activities	1,332	1,447	1,780
Private household with employed persons	1,241	678	417
Activities of extra-territorial organizations			2
Professional, scientific and technical activities			318
Water supply; sewerage, waste management and remediation activities			53
Not reported		397	1,063
Unknown	293	323	250

Table E.3 Industry 1992 - 2011

Industries with the biggest downward movements are: manufacturing and private households. Private households employing people decreased by two thirds compared to 1992. The biggest increase was in the education industry followed by the health and social work industry.

Significant changes were recorded in the composition of person's economic position. The number of employees in permanent service has increased compared to 2001. This number went up by 8.8% to 10,660 persons. Employees in temporary service is now the third largest economic position with 1,798 respondents. The second largest category are the self-employed persons (1,925) that shows an increase of 23.8%.

Of the persons aged 15 and older, 27% have no income. This percentage has increased with 5% compared to 2001. Of the men, 23.1% has no income, in the case of women, 30.4% has no income. For the men, this represents an 8% increase compared to 2001; and the proportion of women without income has remained the same in both census periods.

For those persons with an income, the average monthly income is 2,736 guilders. Just as in 2001, there is still a big difference between the average income of men and that of the women. The average income of men was 3,057 guilders and that of women 2,421 guilders. In 2001, the corresponding figures of men were 2,928 guilders and of women 2,055 guilders.

Average Income	1992	2001	2011
Men	2,169	2,928	3,057
Women	1,436	2,055	2,421
Total	1,837	2,513	2,736

Table E.4 average income by sex 1992 - 2011

Graph E.2 Income by sex 1992 - 2011

Graph E.2 illustrates that in 1992 for every ANG 100 that a male earns, females earn ANG 66. In 2011 this gap has closed to ANG 79. This is a bigger jump from 2001 to 2011 than there was from 1992 to 2001.

The difference in the income cannot be explained solely by applying Cost of living adjustment (COLA). The income for a male person in 2011 with a base of the 1992 income, would be 3,281 and for a female person 2,172. The average income would have been 2,778 instead of 2,736; a difference of roughly 40 guilders.

Under the employed population, 2,958 persons, the majority, were in the income category of 1001-1500 guilders. In 2001 the majority of respondents also belonged to this income category however the number of respondents was 3,587. There were 2,551 persons falling within the income category of 1501-2000 guilders. This was also the second highest income category in 2001, with 2,691 respondents. In third place, was 2,391 respondents earning between 501-1000 guilders. In 2001, this number was 2,430 respondents. The fourth ranked income category, based on highest number of respondents was 2000-2500 guilders with 2,271 persons. However, in 2001 the income category 1-500 guilders was fourth on the list.

Questions were also asked about the most important source of income. In the first place came income from work or from one's own business, which was stated by 16,071 respondents. 49.5% percent are men and 50.5% are women. Overall, this is an absolute decrease compared to 2001 (17,005 respondents).

Income sources	2001	2011
labour/business	15034	6096
Retirement	239	527
Old age pension	708	1228
Welfare	231	163
Property capital	181	112
Scholarship	45	35
Severance pay	31	38
Alimony	157	74
Other	589	500

Table E.5 Income sources 2001 - 2011

The number of people with private pension has more than doubled between 2001 and 2011. Supporting the ageing population theory, the old age pension is the second most increased main source of income.

Graph E.3 Increase / decrease income sources 2001 and 2011

HOUSEHOLD

noun

A house and its occupants regarded as a unit.

Household Characteristics

The number of households on Sint Maarten is 12.854. This is an increase on the number of households in 2001 by 9.6%.

Smaller households (1 or 2-person households) continue to increase while larger households (more than 5 persons) continue to decrease. The smaller households have a 56.4 share of total households, up from 55.9 and 55.6 in 1992 and 2001 respectively. Larger households now constitute 10.8 % of all households, while this was 12.8% and 11.6% in 1992 and 2001.

Household Size	1992	2001	2011
1 person	28.6	29.9	29.2
2 persons	27.3	25.7	27.2
3 persons	19	18.8	19.1
4 persons	12.3	14	13.7
5 persons	7.1	7.1	6.5
6 or more persons	5.7	4.5	4.3
Total	100	100	100

Table F.1 Household size 1992 - 2011

The average household size has remained constant at 2.6 persons per household. While the household size started to decline from the 70's to the 80's, this has now stabilized.

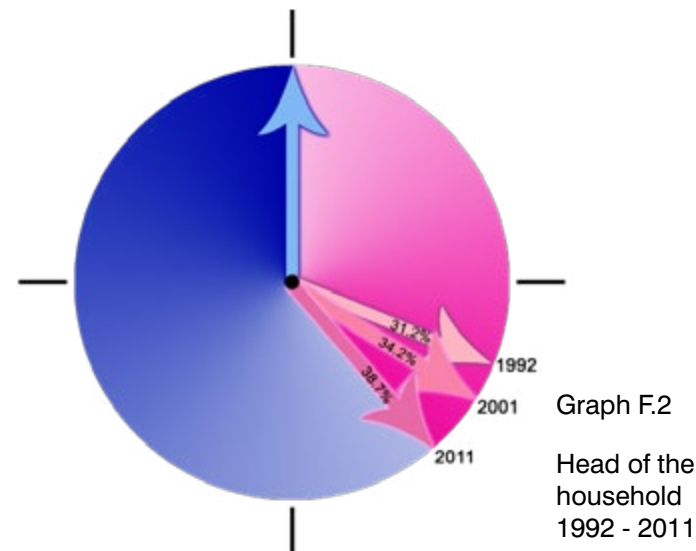

Graph F.1a Average household size 1972

Graph F.1b Average household size 1981

Graph F.1c Average household size 2011

Graph F.2
Head of the household
1992 - 2011

A nuclear family is a unity within a household that consists of:

- Two people who are connected through marriage or partnership;
- Two people who are connected through marriage or partnership with one or more children (including adopted children);
- A parent with one or more children.

Based on these criteria, the following nuclear families can be defined:

1. Married couple with children
2. Married couple without children
3. Couple living together with children
4. Couple living together without children
5. Woman with one or more children
6. Man with one or more children

The 2011 Census revealed the households with two or more nuclear families have doubled. Households without any nuclear families has also increased to 32.5%. This is a direct result of the increase in single person households. A household without any nuclear family can consist of a single person household or roommates who do not have a parent/child bond.

Nuclear families	1992	2001	2011
one nuclear family	62.1	61.9	62.4
two or more nuclear families	2.7	2.6	5.1
no nuclear family	35.2	35.5	32.5
Total	100	100	100.0

Table F.2 Nuclear families 1992 - 2011

The occurrences where a female is head of the household, is increasing over time. In 2011 there are nearly 39 % of households with a female head of household compared to 34% 10 years earlier.

Head of the Household	1992	2001	2011
Male	68.8	65.8	61.3
Female	31.2	34.2	38.7
Total	100	100	100

Table F.3 Head of the household 1992 - 2011

The share of households where English is the most spoken language increased from 64.3 to 67.2. Spanish, Dutch, Papiamentu and French as the main language is decreasing. The number of households where Chinese is the main language is even slightly higher than households where French is the main language.

Language most spoken	1992	2001	2011
English	56.3	64.3	67.2
Spanish	17.1	14.8	13.3
Dutch	3.9	4.2	3.7
Creole	14.1	10	10.3
Papiamentu	4.2	2.3	1.5
French	2.5	1.7	0.3
Hindi			1.3
Chinese			0.4
Other	1.9	2.6	2.0

LIVING ACCOMMODATIONS

noun [mass noun]

A room, group of rooms, or building in which someone may live or stay.

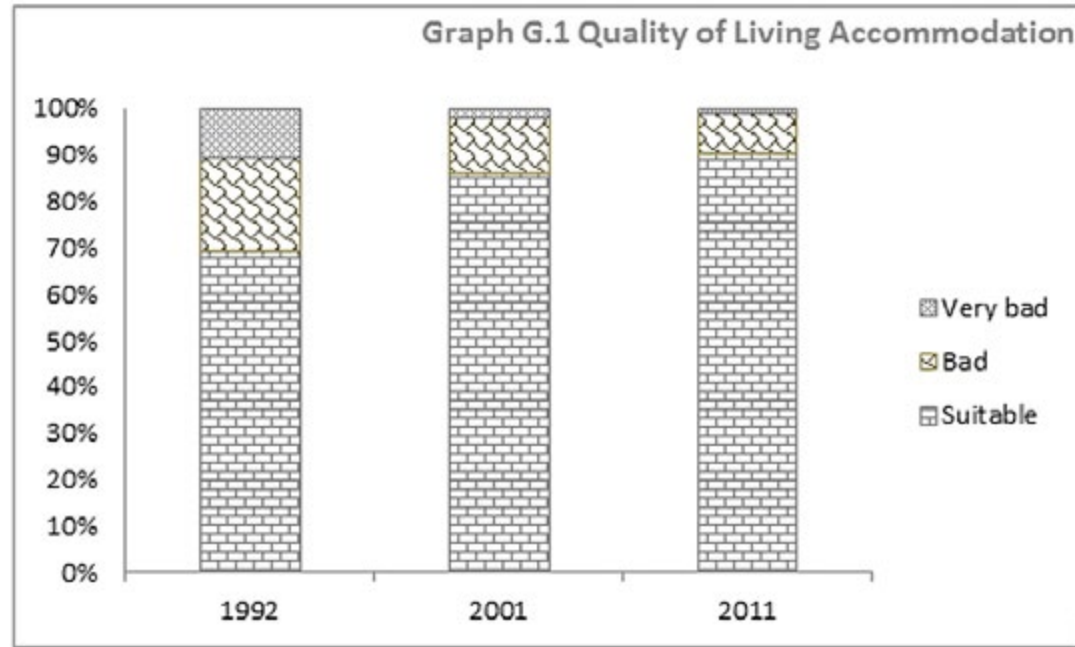

The available space for occupants in a building, vehicle, or vessel.

Living accommodation

A living accommodation is a building, a set of buildings or part of a building consisting of any kind of material which has been designed or has been made suitable through cultivation for habitation by one household. An inhabited living accommodation is thus an accommodation that is permanently or temporarily inhabited by one household.

The quality of living accommodations on St. Maarten keeps improving over time. The percentage of 'Very bad' living accommodations was 1.3% in 2011, compared to previous censuses where it was 11% in 1992 and 2% in 2001. The same can be said for living accommodations characterised as 'Suitable' and 'Bad' which stood at 90% and 8% respectively in 2011. (Table G.1).

Quality of the living accommodation	1992	2001	2011
Suitable	69	86	90.3
Bad	20	12	8.4
Very bad	11	2	1.3
Total	100	100	100.0

Table G.1 Quality of living accommodation 1992 - 2011

In 2011, there is a noticeable increase in living accommodations located on premises of other living accommodations while detached and apartment complexes have slight decreases. Due to a change in the response categories of the 2011 Census questionnaire compared to the 2001 Census questionnaire; classification of a living accommodation as a part of a 'two or more under one roof' is no longer possible. These living accommodations mostly found in Belvedere are classified under the category of "attached to other houses".

Nature of the living accommodation	2001	2011
Detached / equal to one house on a parcel	48	42.5
Part of an apartment complex / attached to other houses	28	26.6
On premises of other living accommodation / apartment or house on a parcel of another house	9	28.0
One or a number of separate rooms in a house	6	2.4
Part of a two or more under one roof	8	
Other	1	0.5
Total	100	100.0

Table G.2 Nature of living accommodation 2001 - 2011

Compared to the Census of 1992 and 2001, there are no differences in rented or ownership of the living accommodations. Even though the percentage of living accommodations 'Rented' increased in 2001, it decreased slightly in 2011, while the percentage of those 'Owned' increased by 2.7%.

Nature of ownership	1992	2001	2011
Own property	42	34	36.7
On freehold land	23	20	20.0
On leasehold land	12	11	11.0
On rented land	7	3	2.7
In a different matter			3.1
On loan	4	1	0.8
Rented	54	65	62.5
From foundation		6	4.9
Furnished	6	7	6.8
Unfurnished	48	50	48.9
Other		2	1.8
Total	100	100	100.0

Table G.3 Nature of ownership 1992 - 2011

With the digitalization of the world, the use of landline telephones is becoming more obsolete as can be seen in the 2011 Census results. The predominance of telephone landlines has decreased to a level below the 1992 Census numbers. Contrastingly, that of mobile phones has increased to 95%.

More than half of households on Sint. Maarten have a personal computer or laptop. This has doubled since the 2001 Census.

The use of internet at home has tripled since the 2001 Census. About one-fourth of Sint Maarten households have internet connection via their mobile phone or mobile 3G.

Facilities	1992	2001	2011
Telephone	28	44	25.2
Mobile phone		43	95.2
Television	84	92	89.8
Cable TV	64	69	71.0
Satellite television			10.9
Video recorder	45	60	
Personal computer / laptop	9	25	56.4
Internet connection		15	46.6
Internet reception via mobile phone			25.0
Mobile internet via laptop or PC (3G)			23.2
Fax machine		18	
Washing machine	54	76	86.8
Refrigerator	88	96	95.2
Freezer	16	14	25.2
Air-conditioning	15	22	
Car	48	59	
Dishwasher			7.4
No facility at all		1	

Table G.4 Facilities 1992 – 2011

The presence of washing machine and mobile phones are among the facilities that increased the most according to the results of the 2011 Census. The landline telephone is now below the level of 1992 where 28% of households at that time, had such a phone. In 2011, this was at the 25% level.
